Updated: #####

**Abstract:**

Brodifacoum (0.32 ppm) and bromadiolone (0.12 ppm) were detected in the liver sample of a red fox from Yolo County, CA during 2011. The liver sample was collected from the red fox as part of a long term genetics and population study. The cause of death for the red fox was not reported. (D1104583-01 S09-0776)

With the present submission it would be important to have postmortem evidence of a coagulopathy for a diagnosis of anticoagulant rodenticide intoxication. In the absence of a coagulopathy, the detected concentrations are consistent with exposure (not intoxication).
